USE OF CONTACT TRACING APP IN PHILIPPINE AIRPORTS

Effective November 28, 2020, the Philippines will implement the use of the **Traze Contact Tracing mobile app** for both departing and arriving passengers and airport personnel.

The Traze Contact Tracing mobile app will be required for all passengers departing from and arriving in the Philippines prior entry to airport premises.

Ensure hassle-free entry to Philippine airports:

1. Download the Traze Contact Tracing mobile app and register to generate your unique QR code. The app is available for both Android and iOS users.
2. Using the Traze app, scan the QR Codes located at the entrance of all terminals before entering the premises.
3. Remember to scan the QR code whenever you enter a new area in the airport. These QR codes are found in strategic locations in terminals and administrative buildings and offices.

For those without smartphones:

1. Approach the Malasakit helpdesks located in the Customer Service area to have your unique QR code printed.
2. Be reminded that you will be required to provide personal information that may be derived in case of contact tracing need. The Philippine government assures such information will be stored in a secure server.
